

SX 19

SORGHUM X SUDANGRASS HYBRID

DESIGNED FOR AREAS WHERE HEAT AND DROUGHT STRESS ARE A PROBLEM

Region: All

- One of SUDAX seed's most drought-tolerant sorghum x sudangrass hybrids
- Good forage quality; very leafy and uniform in maturity height
- Male sterile and will not seed without outside pollen
- Photoperiod sensitive trait allows the plant to remain in the vegetative state with a minimum of 12 hours and 20 minutes daily sunlight; enters reproductive state after day length falls below this threshold
- Ideally suited for dry hay in the Plains states from the Dakotas down through Texas and southwest as well as the arid Intermountain West

Forage Yield	Drought Stress	Heat Stress	Cold Tolerance	Wet Soils	Hay	Baleage	Silage	Grazing	High Starch Feed	Low Starch Feed	Cow/Calf	Stocker	Feeder	Heifer	Dry Cow	Lactating Cow
